

Scott Menor

Head of Product & Technology/ Technical Founder

scott@smenor.com | [linkedin.com/in/smenor](https://www.linkedin.com/in/smenor) | Los Angeles, California, USA

Executive Summary

Visionary Technology Executive with a foundational background in physics and deep expertise spanning systems architecture, product design, and advanced engineering disciplines. Proven ability to lead cross-functional distributed, de-localised organisations from initial concept through to scalable deployment. Specialises in de-risking and delivering complex, high-performance systems—from silicon and sensors to robotics and machine learning / 「 AI 」 by aligning strategic vision with technical feasibility and rigorous execution.

Core Competencies / Leadership Expertise

Executive Leadership & Strategy	Advanced Product Development	Computational Platforms & AI
Systems Architecture & Technical Roadmapping	End-to-End Product Lifecycle Management	Software Architecture (APIs, SDKs, DSLs)
Cross-Functional Organization Leadership	ASIC/FPGA & Embedded Systems Design	Distributed Data Structures Algorithms
P&L Management & Operational Scaling	Mechatronics, Robotics & Sensor Fusion	High-Performance Computing (HPC)
Strategic Planning & Feasibility Analysis	Design for Manufacture / Testing	Machine Learning & Control Theory

Professional Experience

Research Scientist | *Arizona State University/Biodesign Institute/Center for Mechanisms of Evolution* | **2023 - 2025**

- Led research on co-evolution and symbiosis, applying insights applicable to complex systems and resilient design.
- Co-authored work on drift-barrier hypothesis, theoretical framework that defines and predicts the fundamental limits of evolutionary refinement and optimisation.
- Managed interdisciplinary projects, from concept to publication, combining computational modelling with analytical problem-solving

Chief Technology Officer and Co-Founder | *SILSYNC, Inc.* | **2019 - 2023**

- Conceived and built a hardware collaboration platform using a declarative domain-specific system description language (SwiftHW) and compiler to enable asynchronous, conflict-free design.
- Created a scalable framework based on Product/Project Breakdown Structures (PBS) to manage complex system design, which accelerated development and improved team scalability.
- Established the resulting IP as a core company asset, using it to secure funding and differentiate the company in the market.

Lead Cyberneticist and Co-Founder | *Roamrobotics, Inc.* | **2013 - 2023**

- Defined the product and technical vision for a pioneering autonomous personal robotics platform, translating the concept of general-purpose robotics into a practical, architecturally-sound system.
- Orchestrated full-stack integration of advanced technologies from low-level mechatronics and power management to high-level 「 AI 」 and user-facing Behavioural User Interface (BUI) creating a cohesive and scalable product.
- Built and led the technical roadmap, making critical architectural decisions across hardware, software, and AI to de-risk development and accelerate the path to a functional prototype.
- Established the company's foundational IP through the creation of a proprietary OS, API framework, and system architecture, positioning the venture for strategic partnerships and investment.

Research Scientist | *Arizona State University / High Performance Computing Initiative* | **2007 - 2013**

- Developed predictive physical models from first principles to solve complex, high-dimensional problems in dynamic systems.
- Invented a scalable, distributed algorithm, TIMME the Tool for Identifying Mobility in Macromolecular Ensembles to identify patterns in large-scale high-dimensional movement data (large-scale spatial-temporal analytics).
- Spearheaded collaboration and strategy for an international, multi-disciplinary initiative, bridging the communication gap between biologists and software engineers to create a unified project and technical roadmap.
- Managed risk on a long-horizon project aligning diverse stakeholders ensuring technical work met scientific goals.

Education

PhD Physics, Arizona State University

MS Microbiology Emphasis Virology and Immunology, University of Hawai'i at Mānoa

BS Microbiology / BA Mathematics, Arizona State University
